2021 Virtual Conference Speakers - March 20, 2021

Karen Davis, RDH

Repairing The Periodontal Foundation An Unanticipated Return on Investment

It is likely clinicians would agree that beautiful and functional dentistry should be built on healthy foundations. Making accurate and early diagnosis of gingivitis, periodontitis, and peri-implantitis requires time-consuming data collection that is logistically cumbersome in a dental hygiene appointment. Learn how to capitalize on technology to identify gingivitis, periodontitis and peri-implant disease in the earliest possible stage, while yielding an unanticipated return on investment for patients, clinicians and dental practices.

Biography

Karen is gifted in the ability to communicate effectively, and she shares the skills to equip audiences to do the same with their patients. Her diverse background as a clinician, consultant, team builder and speaker enable her to identify with challenges facing Dentistry today and offer innovative, creative solutions that are vital to success in today's world.

Dr. Siavash Hassanpour

Implementing the New Periodontal Classification System

This one hour lecture aims to highlight the major changes introduced in the 2018 Periodontal and Peri-implant Disease Classification system. The lecture will compare and contrast the new system with the 1999 classification system and offer tips and tools on how to best incorporate the new system into your everyday practice.

Biography

Dr. Hassanpour obtained his Doctor of Dental Surgery degree from the Uof T in 2014 and immediately entered the Periodontology Speciality program. Dr. Hassanpour is now a licensed and a board-certified periodontist and runs a practice limited to Periodontology in North York, ON. Dr. Hassanpour is a didactic and part time clinical instructor at the U of T's Graduate and Undergraduate Periodontology clinics.

Dani Botbyl, RDH, Bed (c)

Ultrasonics 2021: Navigating Best Practices

Over the last year, mitigating the risks of AGPs has been top of mind for dental hygienists. The integration of intra-oral HVE systems has happened at record pace but looking ahead, there is more to consider. Ultrasonic instrument selection, sequencing and clinical technique impact aerosols and it's crucial that clinicians elevate their ultrasonic knowledge and skill. This course aims to inform participants how to selectively use ultrasonics to maximize treatment outcomes and minimize aerosols. Note: Via a specialized camera, technique demonstrations will enhance this virtual session.

Biography

Dani Botbyl is an educator, author and researcher. Dani is leading authority in ultrasonic education and serves as the National Clinical Educator with Dentsply Sirona Canada. Dani has developed and presented evidence-based educational programs specific to ultrasonics and aerosol management to dental hygiene students, pre- and post-doctoral dental students, faculty and practicing clinicians nationally and internationally. Current research interests include educational preparedness of dental hygienists for ultrasonic instrumentation with the results guiding the adoption of her teaching methods around the world.

2021 Virtual Conference Speakers - March 20, 2021

Registration opens
January 11, 2021 .

Online registration at
SDHA.ca

Conference Fees \$50

Welcome to the SDHA Virtual Conference and Annual General Meeting.

We are pleased to announce our three speakers who will help to improve your abilities to utilise the new periodontal and peri-implant classification system, will guide you in ways to identify and diagnose perio issues earlier and demonstrate how to maximise treatment outcomes for your patients while minimizing aerosols. Each of the speakers will provide knowledge that will positively affect your abilities as an oral health practitioner.

The Annual General Meeting will be held mid-way through the proceedings – you'll want to attend this session because there will be prizes!

Once the formal sessions wrap up attendees will be able to meet in one of three virtual rooms to network and chat with the presenters. We look forward to seeing you in March!
